① Third Party Vulnerability:- (Dependency / Library Risk)

Vulnerability comes from the external libraries or components your app. use.

Ex:- log4j → Log4shell

SBOM (Software Bill of Materials)
 Map Libraries → Check against CVE database
 Showing Vulnerability Package
 Version
 CVSS Score
 Upgrade records.

CVSS Score - Common Vulnerability Scoring System.

↳ measures the severity of a security vulnerability

0-0 - None
0.1 - ~~0.3~~ 3.9 - Low
4.0 - 6.9 - Medium

7.0 - 8.9 → High
9.0 - 10.0 → Critical

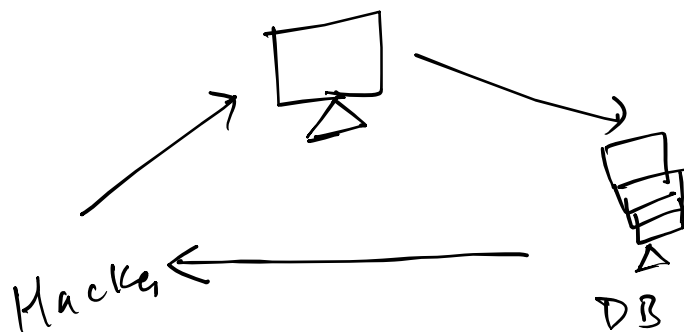

Real Risk (Runtime + CVSS)

CVSS → Risk Rating of a flaw

Low → small spark
Critical → full building on fire.

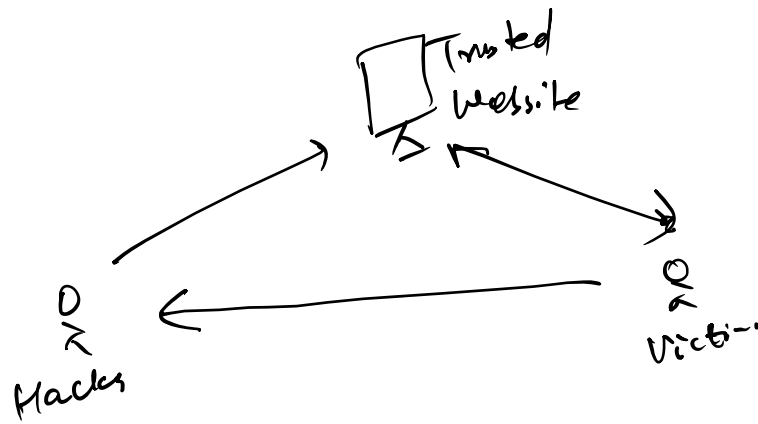

② Code level Vulnerability - Application Logic Risk.

SQL Injection

Cross Site Scripting (XSS):-

Cross site

CIS - Centre for Internet Security Benchmarks
General Best Practice

DORA - Digital operation Resilience Act (EU Regu)
Banking / Finance / EU regulated orgs

NIST enabled - US Based Compliance -
Govt / enterprise grade security program.

DISA STIG :-
US military security guidelines.
- Military / defence project -

Generative AI:-
Prompt → Generate o/p.

- ① Do not take initiative
- ② Only respond when you ask.

It will think, decide & act.
