

- ① SLO
- ② Tagging & MZ → Segment
- ③ Container Monitoring.
- ④ Cloud Monitoring.

① SLI vs SLO vs SLA :-

SLI - Service Level Indicator.

Memory - 93%

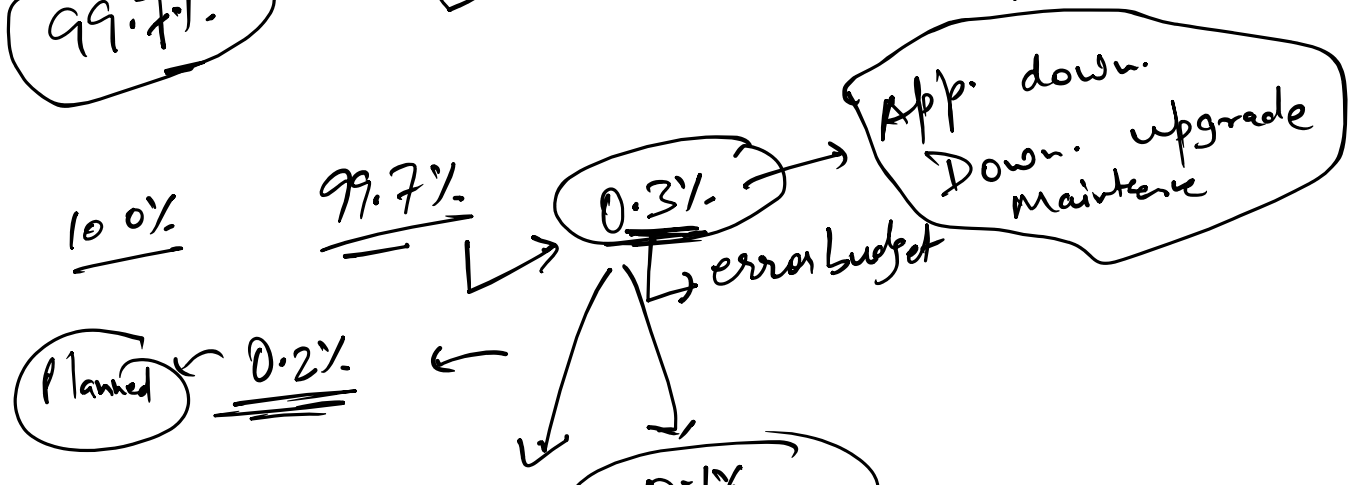

CPU - 30%

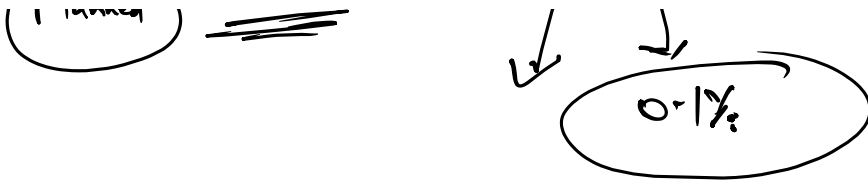

② SLA - Service Level Agreement
P1 → 45 min.
legal terms. → SLA Breach → Penalty / extra Services.
99.5%

③ SLO :- Service Level Objective.

Define inside a team.
P1 = 35 min
99.7%

SLO > SLA
↓
Avoid SLA Breach

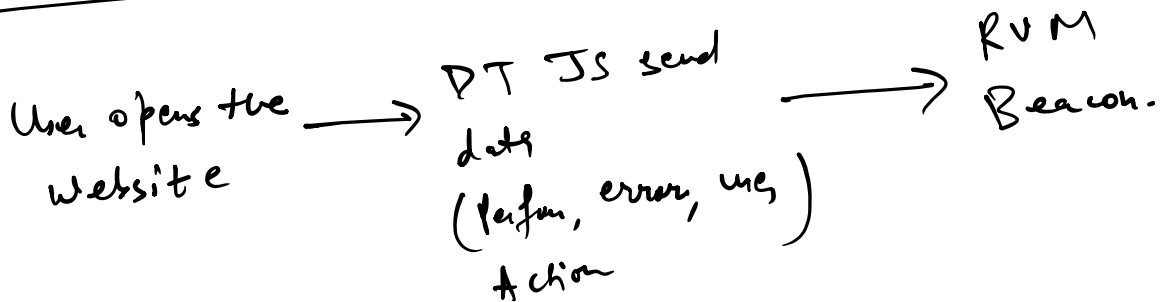

Segment in Dynatrace:- specify group of users, session or actions instead of looking at all traffic.

Dynatrace VS → Dynatrace cluster → One Agent → App.

Beacon in DT:-

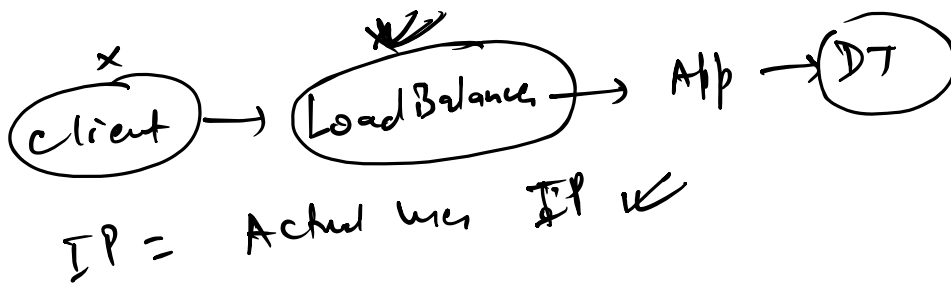

CORS → Cross Origin Resource Sharing.

Advanced correlation:- How browser data is linked / correlated with backend services using HTTP headers.

IP Determination → How DT identify the real client (user) IP address.

How do I optimize RUM data collection w/o overspending?

RUM DT

① Based on User Session

② Billable (DDU/session)

More traffic = More cost

- ① Web frontends.
- ② Mobile frontend
- ③ Custom frontend.
- ④ RUM overload Prevention.

① Web frontends :- Controls RUM data for:-

Website (React, Angular, JSP etc.)

Final session replay% = RUM sampling % × Session Replay%

Final session replay% = KVM sample/

$$= \textcircled{50\%} \times \textcircled{50\%}$$

Final replay = 25% session

Process Instance Snapshot:- CPU, memory
